

The Verbit Interactive Transcription Platform: Features Overview

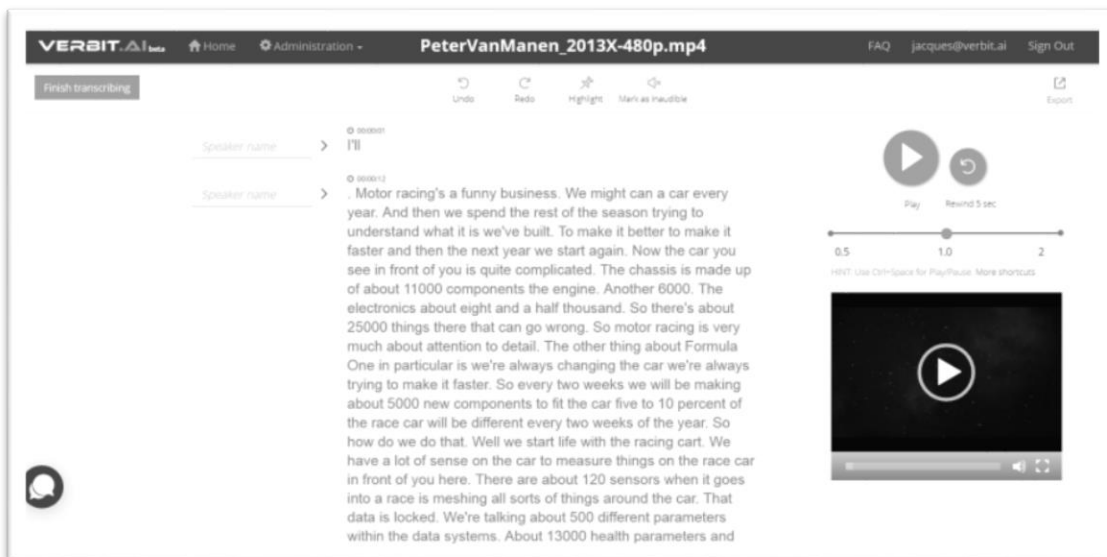

Beyond the unparalleled transcription accuracy (+99%), turnaround time and pricing that Verbit delivers, you will have access to a Web-based management and editing solution that goes far beyond anything else available on the market – saving your organization extensive time and effort.

Advanced Interactive Transcription Editor

- Monitor the progress of all transcription jobs in real time, and add inline comments
- Easily review and edit transcribed text alongside a full-featured, adjustable-speed audio/video player
- Bidirectional synchronization between text and audio/video
- Easily insert or remove audio/content video and re-sync captioning timing
- Re-export transcription text and/or captioning files at any time

Robust Administration Console

- Create any number of users, each with their own permissions for viewing, editing and administration
- Friendly job search by project ID, name, content or “inaudible” marks
- Generate reports on minutes transcribed and amounts paid per job or per user
- Review invoices
- Use the Verbit API to automatically submit media and/or receive transcriptions

Sample Use Case: After captioning was completed for a video course, the course instructor decided to delete a 10-minute portion of the video. It took a content manager less than three minutes using Verbit to remove that portion and export a new captioning file that was accurately re-aligned to the edited video.
